University of Padova, IT

Lab 4 – Nov. 25

- The challenge:
 - Keyword spotting (multi-class classification of audio signals)
- You will learn to:
 - use **pandas** library to handle data structures in Python
 - preprocess audio data (trim/pad, inject noise, compute spectrogram and MFCC + delta coefficients)
 - Implement two types of Graph Neural Networks (GNNs) using TensorFlow **Keras** and train it
 - train the classifier and test its performance using different metrics

LAB 4: GRAPH NEURAL NETWORKS
